

## **Inbreeding in Dutch dairy cattle**

For eight groups of female animals average inbreeding per year of birth is given in tables and graphs:

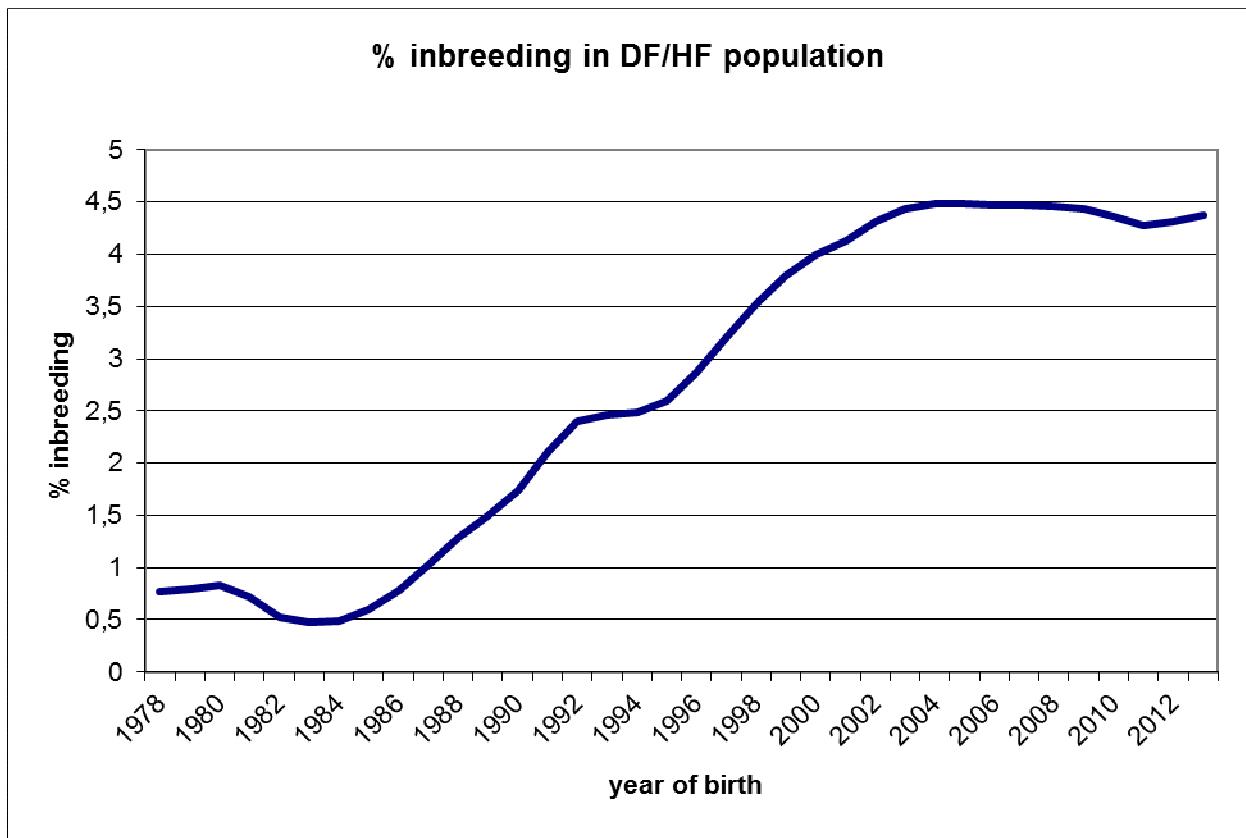

1. female animals having genes from the Dutch Friesian and/or Holstein Friesian breed, black&white and red&white animals
2. female animals which are pure (100%) Holstein Friesian, black&white and red&white animals
3. female animals which are pure (100%) Dutch Friesian (Fries Hollands)
4. female animals which are pure (100%) MRIJ
5. female animals having genes from the Dutch Friesian and/or Holstein Friesian breed, black&white animals
6. female animals having genes from the Dutch Friesian and/or Holstein Friesian breed, red&white animals
7. female animals which are pure (100%) Holstein Friesian, black&white animals
8. female animals which are pure (100%) Holstein Friesian, red&white animals

## Group 1

Table 1. Percentage inbreeding in animals per year of birth. Animals have genes from the Dutch Friesian and/or Holstein-Friesian breed, black&white and red&white animals.

| birthyear | % inbreeding |
|-----------|--------------|
| 1978      | 0,77         |
| 1979      | 0,79         |
| 1980      | 0,83         |
| 1981      | 0,72         |
| 1982      | 0,53         |
| 1983      | 0,47         |
| 1984      | 0,49         |
| 1985      | 0,60         |
| 1986      | 0,78         |
